

P2PE AS A SERVICE

# Decryptx®

Merchants want the security and scope reduction of PCI-validated P2PE. But not every payment company has the time and money to become a validated solution provider. Decryptx® enables processors, payment gateways and software platforms globally to connect to Bluefin and offer our P2PE solution direct to their clients. Bluefin is the only validated solution provider that provides P2PE as a service that is decoupled from payment processing.

## Features and Benefits

**Seamless:** Provide Bluefin's P2PE solution direct through your platform with no change to a merchant's payment processing relationship

**Omnichannel:** Choose from 100+ mobile, countertop, call center and unattended devices from PAX, Ingenico, Verifone, ID Tech and more

**Simple:** Simplify device management and chain of custody for merchants with our 100% online P2PE Manager®

**Value-add:** Increase stickiness by offering the highest level of card-present payment security within your clients' current configuration

## RELATIONSHIP PROGRAM

# Your Payment Security Partner

**Integration:** Our technical implementation team assists all partners with Decryptx integration at no charge.

**Sublisting:** Our sub-listing option enables our partners to list their branded P2PE solution on the PCI website.

**Management:** Each partner receives a dedicated relationship manager to assist with sales, marketing and service.

**Chain of Custody:** Bluefin manages all merchant device chain of custody, from ordering, to key injection at our 14 partner facilities, to the P2PE Manager.
